The Problem / Le problème

Canada is a world leader in children's pain research... but this knowledge isn't being put into practice.

Le Canada est un chef de file dans la recherche sur la douleur pédiatrique, mais le transfert des nouvelles connaissances et l'application des traitements efficaces ne sont pas toujours assurés et n'aboutissent pas toujours à l'adoption de politiques.

The 17-Year Odyssey / Le périple de 17 ans

Our Vision / Notre vision

Healthier Canadians
through better pain
management for children.

Des Canadiens en meilleure
santé grâce à une meilleure
gestion de la douleur pour
les enfants.

The Solution / La solution

SKIP's mission is to improve children's pain management by mobilizing evidence-based solutions through coordination and collaboration.

SKIP a pour mission de contribuer à l'amélioration de la gestion de la douleur chez les enfants en rassemblant les données probantes par la coordination et la collaboration.

SKIP's Outcome / Objectif de SKIP

To improve children's pain management in Canadian health institutions.

Améliorer la gestion de la douleur chez les enfants dans les établissements de santé canadiens.

SKIP's Impact / Impact de SKIP

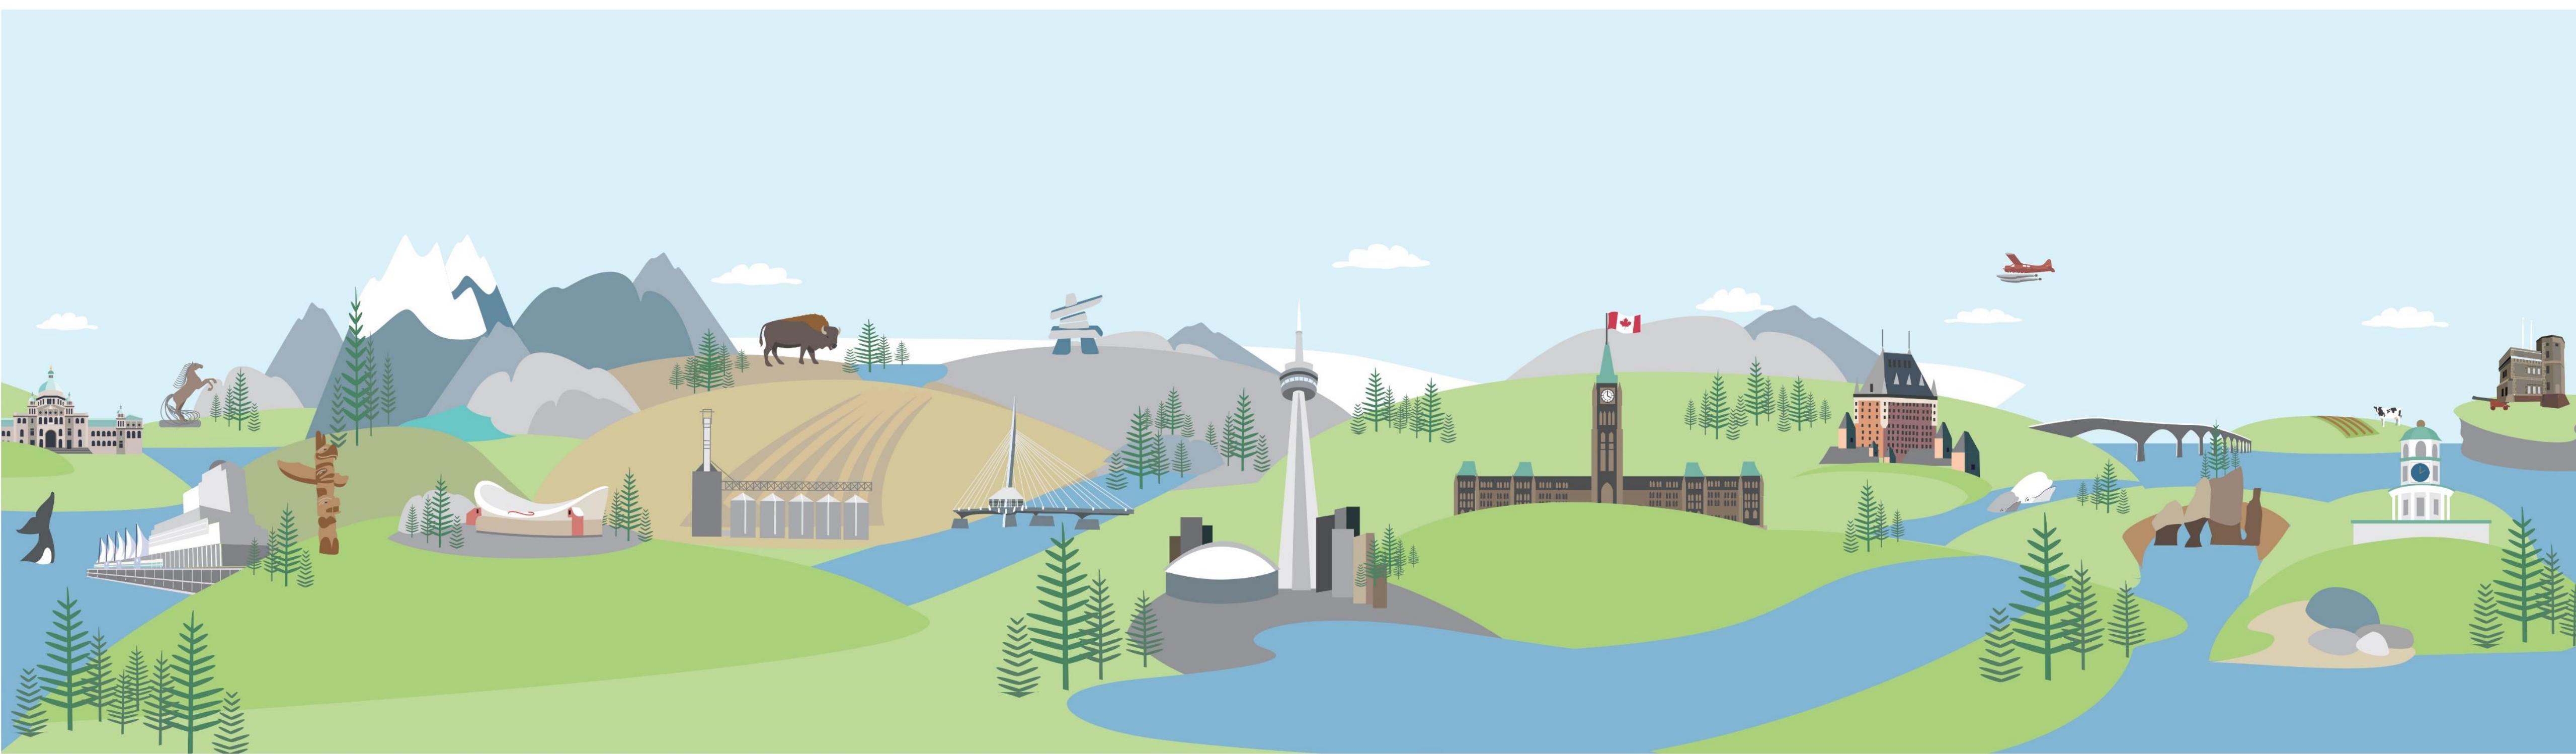

- Less suffering for children and families
- Less avoidance of necessary healthcare
- Lower risk of addiction and chronic pain in adulthood
- Less financial burden on people and the health system
- Canada is the leader in use of knowledge about children's pain

- Moins de souffrance pour les enfants et les familles.
- Moins d'évitement des soins de santé essentiels.
- Moins de risque de dépendance aux médicaments et de douleur chronique à l'âge adulte.
- Allègement du fardeau financier pour la population et le système de santé.

SKIP is a national mobilization network that uses a hub-and-spoke model to create, build up, and leverage connections across Canada.

SKIP est un réseau national de mobilisation qui utilise un modèle de réseau en étoile pour créer, bâtir et mobiliser des contacts et connexions partout au Canada.

Reducing pain during vaccine injections: clinical practice guideline

*Focused on recommendations for children 3-12 years old

Procedural	Physical	Pharmacological	Process	Psychological
<ul style="list-style-type: none"> • No aspiration • Inject most painful vaccine last • Suggest against simultaneous injection 	<ul style="list-style-type: none"> • Sitting up • External vibrating device with cold • Muscle tension for those with hx of fainting • No manual tactile stimulation • Do not warm vaccine 	<ul style="list-style-type: none"> • Topical anesthetics • Suggest against vapocoolants • No acetaminophen or ibuprofen before 	<ul style="list-style-type: none"> • Education about pain management for immunizers, parents, and child being immunized • Parent(s) present for children 10 years & younger 	<ul style="list-style-type: none"> • Verbal signal of procedure • Distraction (verbal, video, music, breathing with toy) • Avoid false suggestion • Avoid reassurance • Suggest against breathing (cough)

Exposure-based Interventions for the management of individuals with high levels of needle fear across the lifespan: a clinical practice guideline and call for further research

COGNITIVE BEHAVIOUR THERAPY, 2016
VOL. 45, NO. 3, 217–235
<http://dx.doi.org/10.1080/16506073.2016.1157204>

Table 1. Interventions for reducing fear and/or fainting in individuals with high levels of needle fear.

Treatment	Recommendation	Strength	Children (7–12 yr)	Adolescents (>12–17 yr)	Adults (≥ 18 yr)	Confidence
Exposure-based therapy	We recommend <i>in vivo</i> exposure-based therapy (vs. no treatment)	Strong	✓	✓	✓	Very low
	If <i>in vivo</i> exposure-based therapy is not used, we recommend non- <i>in vivo</i> exposure-based therapy (vs. no treatment)	Strong	✓	✓	✓	Very low
	If <i>in vivo</i> exposure-based therapy is used, we suggest a single session rather than multiple sessions*	Weak	✓	✓	✓	Very low
Applied tension (muscle tension and exposure)	We suggest applied tension in individuals with fainting* (vs. exposure alone)	Weak	✓	✓	✓	Very low

*Described in online supplementary material only.

Commitment to Comfort

Information for Albertans

AHS is committed to making your healthcare experience as comfortable as possible.

Commitment to Comfort promotes comfort by helping lessen pain and distress that may be experienced during immunization, medical procedures and blood collection.

The five Commitment to Comfort (CTC) principles support people of all ages to have a more comfortable healthcare experience.

HOW TO guide for concerned youth (ages 12 – 15) on how to proceed with their COVID-19 vaccinations

WHAT IS NEEDLE PHOBIA?

Needle phobia is a very severe + irrational fear of needles. It results in extreme avoidance of needles and sometimes fear + avoidance of medical settings more broadly. Individuals with needle phobia can often explain why needles are important for their health + express wanting to have a vaccine completed. However, when it comes time to have a needle administered, excessive fear takes over + they are not able to cooperatively have the needle.

Affects 2-3% of the youth population

WHERE TO START:

1. Please reach out to the NS Health Hotline: [1-877-334-3032](tel:1-877-334-3032)

Resources that may be of help:

- [IWK Health Centre - Nervous about needles? \(inhealth.ca\)](#) (IWK/NS Health)
- [Updated Vaccine Pain & Needle Fear Resources \(kidsinpain.ca\)](#) (SKIP – Solutions for Kids in Pain)
- [Solutions for Kids in Pain \(SKIP\) Improving Children's Pain Management](#) (SKIP – Solutions for Kids in Pain)
- [How to talk to your children about COVID-19 vaccines | UNICEF](#) (UNICEF)
- [Managing Needle Anxiety: Strategies for Supporting Your Child Through Injections and Bloodwork - YouTube](#) (IWK Child Psychology)

*NS Public Libraries are a great way to access computers and the internet for booking vaccine appointments or when checking out the listed resources

2. Public Health will screen and provide follow-up:

The goal will be to provide you with the most appropriate resources for moving forward with strategies for a successful COVID-19 vaccination.

An individualized approach will be applied to all those accessing this resource.

We know that what works best for one, might not be the best for another.

3. CHILD LIFE SPECIALISTS may be consulted to assess and provide follow-up:

Supports might include:

*Based on assessment and on a case-by-case basis, in-person supports may be offered.

4. CHILD PSYCHOLOGY is looped in:

Foundational work is provided to lay the groundwork for moving forward and coping with Needle Phobias with a lifelong approach. An evidence-based treatment, involving gradual exposure to needles and the stimuli associated with them (e.g., alcohol wipes), is used.
